Submitting business case to CFO for review...

CFO

Alright, let's get down to business. I appreciate the initiative to automate, but I require precision and rigor in financial projections. This business case has some glaring issues that undermine its credibility.

CFO Review: Accounts Payable Invoice Processing Automation

1. Financial Model Evaluation

- Estimated Dev Hours (120):** This figure is highly suspect, bordering on unrealistic for a comprehensive Accounts Payable Invoice Processing automation involving OCR, exception handling (5% rate), and SAP integration. A robust, production-grade solution for a process of this complexity typically requires significantly more development, testing, and refinement. Are we talking about a single, fixed-format vendor, or the full breadth of AP invoices? If the latter, 120 hours (roughly 3 weeks) suggests a dangerously oversimplified scope or a severe underestimation of effort. **This needs immediate re-evaluation and detailed breakdown.**
- Blended Dev Rate (€75/hr):** This rate is acceptable, assuming it covers all associated costs for internal resources.
